Skills

Frontend – React.js, Next.js, Vue.js, Nuxt.js, React Native, TypeScript, JavaScript, Redux, HTML, CSS, Tailwind CSS, Bootstrap, Shadcn/UI, Vuetify

Backend – Node.js, Express.js, NestJS, REST APIs, GraphQL, WebSockets, Socket.io, GO, Role-Based Access Control

Databases – PostgreSQL, MySQL, MongoDB, Redis, Prisma

Cloud / DevOps – AWS, Firebase, Docker, Nginx, Vercel, Git, Linux, CI/CD, Kubernetes Concepts

AI / Emerging Tech – LLM API Integrations (OpenAI, Gemini, Groq), AI-assisted Development, Workflow Automation

Experience

BestDoc Technology | Lead Software Engineer

- Leading full-stack product development for healthcare workflow platforms using Vue.js, Nuxt.js, Node.js, and backend service integrations for enterprise hospital operations.
- Built and delivered the complete **Homecare module end-to-end**, covering patient workflows, service requests, approvals, operational dashboards, and workflow automation.
- Architected and streamlined the notification infrastructure for admins, hospital staff, and end users, significantly improving communication reliability and operational response times.
- Designed and implemented secure workflow features including OTP verification, request lifecycle completion flows, approval pipelines, and role-based access control systems.
- Built reusable, scalable frontend architecture and modular components, accelerating feature delivery while improving maintainability across deployments.
- Collaborated with product, operations, and engineering teams to deliver production-ready healthcare solutions used in real-world hospital environments.

App Stone | React Native Developer

- Engineered cross-platform mobile applications using React Native, delivering highly responsive user experiences across iOS and Android platforms based on production-ready Figma designs.
- Developed premium discovery and event-based application features including personalized listings, venue discovery, and user engagement workflows.
- Implemented user profile management and booking experience improvements, reducing friction in conversion-critical user journeys.
- Integrated REST APIs and optimized mobile application performance for better responsiveness and improved user retention.

Eclidse Technologies | Full Stack Developer

- Developed full-stack web applications using the MERN stack, delivering scalable business applications with strong performance and responsive user interfaces.
- Built frontend interfaces, backend APIs, and database-driven application workflows across multiple client projects.
- Participated in architecture discussions, debugging sessions, and collaborative engineering planning to improve delivery speed and product stability.
- Created technical documentation and implementation references that improved onboarding efficiency for engineering teams.

Education

University of Calicut

Bachelor of Arts in English

2020 – 2023
